Hwiyeon Kim

Product Designer & Data Analyst

hwiyeon.d@gmail.com · hwi-yeon-kim.github.io/ai · linkedin.com/in/hwiyeon-kate-kim

SUMMARY

Product designer and data analyst with 6+ years of experience across mobility, enterprise AI, fintech, and healthcare. Pairs HCI research training (M.S., Computer Science) with product execution: funnel analytics, A/B testing, and empirical user studies that turn behavioral data into UX decisions. Results include a hypothesis-validation tool that cut turnaround from 20 days to 7 minutes, a 28.1% to 46.7% sign-up conversion lift, and 40.47% demo-to-trial conversion. Recognized with 4 peer-reviewed publications, 6 patent filings, and Red Dot / IDEA Design Award finalist honors.

EXPERIENCE

Product Designer & Data Analyst — Hyundai Motor Company May 2024 – Present

Infotainment Mobile Development Team

- Built an internal hypothesis-verification tool integrating Google Analytics and Figma, cutting data validation from 20 days to 7 minutes for 56 active squad members (Excellence Award, 2026). Analyzed 320,000+ users' 3D asset engagement for the HMG Tech Summit 2026.
- Led UX/UI for the unified Map & Search tabs across MyHyundai, MyGenesis, and Kia on a shared SDK. Launched localized discovery for Japan, Canada, and Europe, and A/B tested search layouts and rating-filter interactions.
- Prototyped in-vehicle post-crash guidance as a step-by-step Wizard and an AI Chat concept, and tested both in a 25-driver simulator study (AutomotiveUI 2025; USPTO co-filed patent). Designed Top-View flows for Remote Smart Parking Assist.

Product Designer — Upstage INC. Jan 2023 – Apr 2024

Document Intelligence Team

- Redesigned the Intelligent Document Processing (IDP) API demo as a self-service GUI, cutting the path to purchase from 4 steps to 2 and shortening the sales cycle by up to 2 weeks; 40.47% of homepage demo visitors became active trial users.
- Interviewed 5 enterprise clients in finance and insurance to map document-processing workflows, shaping the 0-to-1 Document AI roadmap.

UI/UX Designer — BNK Kyungnam Bank Jun 2022 – Dec 2022

Digital Strategy Department

- Redesigned the MyData asset management app around an asset overview, a spending report, and a savings-goal challenge, guided by personas and journey maps.
- Benchmarked 18 banking, fintech, card, and securities apps to redesign financial product discovery with themed recommendations, interest previews, and side-by-side comparison filters.

Founding Product Designer — Thyroscope INC. Dec 2020 – May 2022

Product & Design Team

- Raised download-to-signup conversion from 28.1% to 46.7% (+66.2% relative) by diagnosing onboarding friction in Google Analytics, and established a cross-platform design system from scratch.
- Led the redesign of the predictive healthcare app around daily routines, health records, and long-term trends, based on 5 user interviews and validated by a 57-user post-launch survey.
- Designed camera guidance for thyroid-eye self-screening, refined through usability testing, resulting in 2 registered patents and Red Dot & IDEA Design Award finalist recognition (2022).

SKILLS

Product design	Figma, design systems, interaction design, information architecture, prototyping, multi-platform consistency (web, iOS, Android)
Research & analytics	User interviews, usability testing, surveys, A/B testing, funnel analysis, Google Analytics, SQL, Python
Collaboration	Squad work with PMs and engineers, stakeholder alignment, design critiques, turning ambiguity into product specifications

EDUCATION

M.S., Computer Science — UNIST Mar 2019 – Feb 2021

Human-Computer Interaction & Information Visualization

- Studied visualization thumbnails, data visualization perception, and decision-making in HCI experiments with 161 participants, using statistical models (Thurstonian modeling, A/B testing) for validation.
- Co-invented a patented thumbnail-generation method, technology-transferred to Upit Korea (2025). Graduate Research & Teaching Assistantship Fellowship.

B.S., Industrial Design & Computer Science — UNIST Mar 2014 – Feb 2019

National Scholarship for Science & Engineering

PATENTS

- Method and apparatus for generating thumbnail images (UNIST; licensed to Upit Korea, 2025).
- Method for guiding a hospital visit for active thyroid-associated ophthalmopathy (Thyroscope; registered).
- Method for acquiring a lateral image for eye protrusion analysis (Thyroscope; registered).
- Multimodal route guidance system (Hyundai; filed 2024, pending).
- Method for providing a guide for managing an accident (Hyundai; filed 2025 in Korea, co-filed with the USPTO).
- Visualizing destination reachability from EV battery information during route search (Hyundai; filed 2026, pending).

AWARDS & SERVICE

- Excellence Award, Corporate Safety & Quality Innovation Contest, Hyundai Motor Company (2026)
- Honorable Mention, Future Mobility Idea Contest, Hyundai Motor Company (2025)
- Finalist, Red Dot Design Award and IDEA Design Award, Thyroscope (2022)
- Invited speaker, Woowa Bros (Delivery Hero) Tech Session (2023); reviewer, IEEE VIS (2020)
